**Need Power?
Go Solar
Cut the Electric Bill
Remote Power
Save the environment
Have power when the
grid goes out**

A Solar spill is what we call a sunny day!!

WHY SOLAR??

- *Reliability
- *Convenience
- *Peace of Mind

Reliability applies very much to a grid-tie system. Peace of mind is added when it is a grid-interactive system, as it will supply power automatically, even when the electric grid is down. Off-grid solar systems offer convenience; especially when the other options might be to operate a generator, or to do without electricity. Either of **those options** are much easier said than done.

- *Long Lasting
- *Low Maintenance

These are phrases that everyone loves to hear when speaking of household items. There is nothing **that** will wear out in a Solar Panel. With batteries integrated the system boast a substantial life span **with** the highest quality batteries **lasting** up to 20 years. There is only a slight loss of power in the system over a lifespan of 50 years.

With a grid interactive solar system you will have power when the lines go down and your neighbors are in the dark. Never go through a storm in the dark again.

If you need power at the cabin so it's family friendly for vacation or hunting. With Solar you can always have power anywhere without the grid.

There's nothing quite like the satisfaction of seeing your meter spin backwards and to know you're doing your part in helping the environment.

Whether you are looking to reduce your global impact or want to lock your utility bill on a single rate for 20+ years then you are headed in the right direction. At Belmont Solar we would love to help you discover the benefits and joys of being in control of your utility bill. We are passionate about what we do. We strive to "Make the Best get Better"!
